

Practical 5 – PL/SQL

Oracle / PLSQL: Procedures

Syntax

```
CREATE [OR REPLACE ] PROCEDURE <Name of the procedure>
[ (parameter[,parameter])]
IS
[<DECLARATION Section>]
BEGIN
<Execution Section>
EXCEPTION
    Exception-handling-statements
END[<Name of the PROCEDURE>];
```

Example:

01. Write a procedure called *UpdateCourse*. It has one parameter called *name_in*. The procedure will lookup the course_number based on course name. If it does not find a match, it defaults the course number to 10000. It then inserts a new record into the student_courses table.

Drop the procedure *UpdateCourse*

Oracle / PLSQL: Triggers

```
CREATE [OR REPLACE ] TRIGGER trigger_name
{BEFORE | AFTER | INSTEAD OF }
{INSERT [OR] | UPDATE [OR] | DELETE}
[OF col_name]
ON table_name
[REFERENCING OLD AS o NEW AS n]
[FOR EACH ROW]
WHEN (condition)
DECLARE
    Declaration-statements
BEGIN
    Executable-statements
EXCEPTION
    Exception-handling-statements
END;
```

02. Write a trigger for the customers table that would fire for INSERT or UPDATE or DELETE operations performed on the CUSTOMER table. Trigger should display the salary difference between the old values and new values

ID	Name	Age	Address	Salary
1	Louvis	23	Italy	50000
2	Alvin	36	Osbo	65000
3	Teri	55	Ohio	66000
4	Hardic	42	Mumbai	55000
5	Koamal	47	Delhi	96000
6	Charles	36	MP	23000

03.

emp_id	Name	Email	hire_date	PhoneNo	Jobid	Salary	Commission	managerid	deptid
100	Stevan	SKING	1987-06-20	515.123.1269	IT_PROG	2400	0	0	90
101	Thivyan	LDEHAAN	1988-08-25	515.123.4569	IT_PROG	5600	0	100	90
102	Jenny	AHUNOLD	1987-07-17	515.123.3697	FI_ACCOUNT	8900	0	100	60
103	Alex	BERNST	1987-01-30	515.123.1124	PU_MAN	7800	0	102	60
104	Bravon	DAUSTIN	1987-11-21	515.123.9698	ST_CLERK	4500	0	103	100

a). Write a PL/SQL program to display the name of the employee and increment percentage of salary according to their working experiences.

b). Write a PL/SQL block to display the employee ID, first name, job title and the start date of present job.

c). Create a PL/SQL block to increase salary of employees in the department 50 using WHERE CURRENT OF clause.

d). Write a program in PL/SQL to create a cursor displays the name and salary of each employee in the EMPLOYEES table whose salary is less than that specified by a passed-in parameter value.
